INTRODUCTION

The reference data contained herein are based upon the organization of TD Units as set forth below. Since Tables of Organization and Tables of Equipment are subject to change, and strength and composition of units in the field forces will vary these data are issued to students of the TD School for use in the solution of school problems only. TD units of the field forces should consider these data only as a guide in the preparation of their own data.

* No units of fire for items indicated by asterisk (*) have been prescribed by the War Department for Tank Destroyer Units. The units of fire for these items in the table above have been adopted for use at the TD School for the solution of school problems only.

"The unit of fire is an arbitrary unit of measure for ammunition supply.....
The unit of fire is not synonymous with the term 'day of supply'.....
It is....not practicable to make allocations of ammunition below the army in terms of units of fire. In the initial phases of any operation, when it is necessary to speak of ammunition supply, it is perfectly logical to speak of the stocks on hand in divisions, corps, or army in terms of unit of fire; or in planning for specific operations, it is proper to speak of estimated requirements of ammunition for a large unit in terms of unit of fire. It is not proper, however, after initial allocations have been made to make allocations of ammunition for replenishment of stocks in terms of units of fire. Troops expend ammunition by rounds. They require replenishment by rounds of specific type. All allocations of ammunition for replenishment purposes will be made in terms of rounds of ammunition." (FM 9-5, Par 19d.)

AMMUNITION

NOTES

- (1) 100% Ball.
- (2) 80% AP, 20% Tracer
- (3) 75% APC, 20% HE, 5% Cannister
- (4) 75% APC, 25% HE.
- (5) 6 ea. of M11, M15, M16.
- (6) 6 ea. of M17, 18, 19, 20, 21, 22.
In lieu of the signal flares M11, M15, M16 for pistol pyrotechnic M8 or M2 or the M17-22 flares for projector, signal ground M4 flares for projector, signal, hand M9 or grenade launcher may be substituted. (Signal flares M17-22 modified for use with grenade launcher are called M-17-22 A2) See notes (5) and (6) above.
- (7) 1 unit - 10-5' sections, complete w/connectors and launching nose.
- (8) 100% ball; 90 rounds on individual; 90 rounds on vehicle in which individual rides.
- (9) 80% AP, 20% tracer. 1000 rds for each of 2 MGs per vehicle.

BASIC DATA OF CLASS I AND III SUPPLIES

Item	Unit	Weights	Remarks
Class I: A-ration	Each	5.12 lbs. net. 6.22 lbs packed Average for planning 6 lbs. per ration	Perishable --contains fresh food
B-ration	Each	Same as A-ration	Same as A-ration with non-perishable items substituted for perishables.
C-ration Pack. of 8	Each Package	4.2 lbs. 41 lbs.	Prepared meals in individual cans. 6 cans per ration.
D-ration Pack of 48 rations	Each Package	.75 lb.. 51 lbs.	3 chocolate bars per ration
K-ration Pack. of 12 rations	Each Package	2.3 lbs. 43 lbs.	Non-perishable, concentrated meals in individual packages, 3 packages per ration.
Water	Gallons	For planning 52 lbs. per 5 gal. container.	
Class III: Gasoline for cooking	Gallons	For planning, 41 lbs. per 5 gal. contain.	10 gallons per day per 3 unit kitchen.
Gasoline for motors	Gallons	For planning, 41 lbs. per 5 gal contain.	
Engine oil for motors	Gallons	For planning, 46 lbs per 5 gal contain.	Approximately 3% of gasoline required.

MARCH DATA

SM	Average Time - length in min- utes of 100 vehicles	Time Length of a March Unit or Column.
2	6.75	The time-length of a march unit may be obtained by multiplying the average time-length in minutes of 100 vehicles for the appropriate SM by the number of vehicles in the march unit and dividing by 100. e.g. A company of 44 vehicles using an SM of 5 would have a time-length of $17 \times 44 \div 100$ or 7.48 minutes.
3	10.25	
4	13.75	
5	17.00	
6	20.50	
7	23.75	
8	27.25	

Average Road Space of a March Unit or Column

SM	Average Speed of Column in Miles Per Hour					
	5	10	20	25	30	
2	0.6	1.25	2.25	2.75	3.5	Approximate road space in miles of column composed of 100 vehicles.
3	1.	1.75	2.5	4.25	5.25	
4	1.25	2.25	4.5	5.75	6.75	
5	1.5	2.75	5.75	7.25	8.75	
6	1.75	3.5	6.75	8.5	10.25	
7	2.	4.	8.	10.	12.	
8	2.25	4.5	9.	11.25	13.5	

To obtain road space in miles, select the figure under the proper speed opposite the appropriate SM, multiply by the number of vehicles in the column and divide by 100.
